

## X-Uptime

X-Uptime is an event detection tool, which automatically tracks start and stop events on rotating equipment packages.

*X-Uptime is part of a range of AI-driven software tools designed by OPEX to help asset teams address specific business challenges.*

## Benefits

- Automatically track the running history of rotating equipment across a facility, allowing asset teams to get a broad view of repeat bad actors and focus maintenance activities

## Features

- Automated event detection engine
- Track running hours of rotating equipment
- Track and categorise equipment downtime
- Auto-identify and track failed starts
- Capability to annotate events and trends
- Events can be reviewed in annotated trends showing the associated running tag, with start, stop and restart events annotated on the trend
- All fields fully text searchable
- All data can be sorted and filtered
- Events can be reviewed and edited (for example, when a faulty instrument tag results in an inaccurate event being recorded)
- Audit history of manual event updates
- Can connect external systems to the data store for further analysis (Excel, PowerBI, etc)
